Objective

With 11 years of experience in the software industry, I have gained a wide exposure to all aspects of software development. I am looking forward to harness my experience and potential to the fullest in building effective software solutions. In the process, I am keen on sharpening my skills, learn new technologies and gain rich experience.

I am also looking for a job which will help me have a work-life balance, so that I can do good justice to my personal as well as professional aspects.

Experience

11 years of work experience in software development that includes software development and maintenance, product development, onsite co-ordination.

Assignments

Project Name	Certus++	
Description of the project		
<p>The company has acquired another firm called Certus which has specialization in a smaller domain within GRC. The Project Certus++ involved enhancing 5 of the MetricStream products to include the features of Certus. This was done to enable the existing clients of Certus migrate to MetricStream products smoothly without losing any functionality or data.</p> <p>My contribution to the project</p> <ul style="list-style-type: none">• Got an in-depth understanding of both the products and identified gaps in their functionalities.• Co-ordination with Business analysts, Client facing delivery teams, development and QA teams.• Designed requirements with Business Analysts• Lead the development team to build the solution.• Acted as data architect - designed an intermediate data model and a data migration solution.• Was awarded a spot award for my contribution to the project		
Role	Solution Architect	
Responsibility	Data architect, Build Requirements, Design, Construction, Testing support	
Duration	From : March 2013	To : April 2014
Software	Oracle 10g, JSP, EXTJS	

Project Name	GRC Foundation Library
Description of the project	

This is a GRC product to build and maintain a central repository of all GRC objects. This is a base and foundation for all other MetricStream products.

Key highlights and my contribution to the project :

- Created a flexible and easily customizable design to accommodate different types of GRC objects and different business domains.
- Requirements analysis, design and development, release and support.
- Single point of contact for the product, co-coordinating between business analysis, project managers, release managers, delivery teams, development and QA teams.
- Development manager leading a team of 6 people.
- Responsible for timely enhancements to the product keeping in sync with latest business requirements and underlying platform versions.
- Knowledge sharing and training to other teams
